Summary

Full-Stack Software Engineer with experience building React and Next.js applications, and AI-powered systems at early-stage startups. Comfortable working across frontend, backend, and operational concerns to ship end-to-end features.

Work Experience

Wisent – Mobile App Developer (Contract)

Oct 2025 - Present | Early-Stage Startup

- Built AI function-calling tools and implemented a client-side execution engine for natural language **CRUD** operations.
- Implemented an AI tool system with backend function definitions for LLMs and corresponding frontend execution handlers to support calendar and scheduling workflows.
- Architected a multi-tier **AI model** routing system that dynamically selects models based on request complexity, latency constraints, and cost trade-offs.
- Integrate backend **API** endpoints with React Native UI components to deliver fully functional features.

Timio News – Chrome Extension Developer (Contract)

Nov 2025 - Present | Early-Stage Startup

- Resolved tech debt by **reverse-engineering** build artifacts to reconstruct missing source code, restoring alignment between the 1.5 production build and the outdated 1.4 codebase.

Tristyn Tech – Web Developer (Contract)

Mar 2025 - Aug 2025 | Early-Stage Startup

- Built and maintained **full-stack React** applications in an **Agile** team, contributing to feature development and code reviews.
- Gained hands-on experience in debugging practices under mentorship from senior engineers, using **Chrome DevTools** to trace issues, inspect **API** responses, and verify data flow across components.
- Integrated **accessibility** features, including tab navigation and screen reader support, improving **WCAG** compliance and user experience for users with disabilities.

Tristyn Tech – QA Tester (Contract)

Jan 2025 - Mar 2025 | Early-Stage Startup

- Conducted manual QA testing and documented bugs, contributing to improved application stability and reduced release errors.
- Designed and executed QA test scenarios that uncovered a session-isolation defect where user data could persist across authentication changes, preventing potential sensitive data exposure before release.

Personal Projects

Music Hub

A music community platform with forum features.

Tech Stack: Python, TypeScript, React, Next.js, Node.js, MongoDB, OpenAI API, Sentry, Better Stack

- Applied prompt-engineering to refine AI-generated content, improving contextual relevance and user engagement.
- Developed a **Python** background worker to automate daily forum topic generation, scheduling OpenAI API calls to create music-theory discussions.
- Designed and built responsive UI components with React, ensuring consistent UX across devices.

Troubleshooting & Observability

Implemented end-to-end observability using Sentry and Better Stack, including structured JSON logging, correlation IDs, API and database latency tracking, and alerting on performance thresholds.

Troubleshooting Process

The complete incident-response lifecycle (detect → diagnose → resolve → prevent)

Detection: Configured Better Stack alerts for API latency >1000ms; Sentry tracks error spikes

Investigation: Correlation ID tracing across logs to pinpoint bottlenecks (e.g., slow MongoDB queries)

Root Cause: Python script identifies patterns—slow operations, missing indexes, error clusters

Resolution: Infrastructure measures impact (e.g., P95 latency before/after index optimization)

Prevention: Weekly analysis and documentation of recurring issues to guide future improvements

QA-Report App

Built to improve QA testing efficiency at TristynTech by solving a real-world problem.

Tech Stack: JavaScript, React, Node.js, Express, MongoDB, Google Cloud Platform

- Built a QA tool to streamline my work process and improve team debugging efficiency.
- Developed modular RESTful APIs using Express and Mongoose to log and retrieve QA testing records.
- Utilized the Google Cloud Storage SDK to handle file uploads.

Certifications

Full Stack Web Development Bootcamp Certificate

Center for Professional Education (The University of Texas at Austin)

Completed full-stack training in modern JavaScript, REST APIs, databases, and deployment practices.

Skills

Languages:	JavaScript, TypeScript, Python
Frontend:	React, Next.js, React Native, HTML, CSS, Tailwind
Backend:	Node.js, Express, RESTful APIs
Databases:	MongoDB, MySQL
Cloud & Tooling:	Google Cloud Platform, Firebase, Docker
Observability:	Sentry, Better Stack (Logtail)
